- Q & A

INTRODUCTION : Purpose

Problem statement:

- Pricing & Profitability Challenge

AIM

- To transform the historical car sales data into actionable recommendations that will guide future sales and marketing strategies.
- **Focus**
- Product performance
- Sales performance
- Profit Analysis

Sales Analysis

- Monthly sales showed a significant decline in the April and July
- July is the month with the highest average selling price.
- profitability trends over months reveals that they are below market benchmark

Sales : 20 Best Selling Model

- Ford is the best selling make amongst the top 20 cars identified as sample.
- Mercedes-Benz is top in the average selling make
- On average all cars are selling almost below the market benchmark

Profit Analysis

- Sales of the Altima, F-150 and Fusion account for more than 60% of all units sold, while low-volume models like Grand Caravan and 3 Series contribute very little indicating a concentration of demand in few key models
- Most car sales are low-profit and more than half are losses, indicating severe margin pressure and the need for quick changes to pricing and inventory strategies.

Sales Analysis per time

- From 2014 to 2015, the average selling price increased, indicating either better pricing tactics or higher-value sales.
- The average selling prices show that mid-year is the most profitable period and year-end is a clearance-focused period, rising steadily from Q1 to a peak in Q3 (~16,977) before sharply declining in Q4 (~11,294).
- profitability trends over months reveals that they are below market benchmark

- 
- Reduce slow-moving inventory and modify seasonal inventory while giving top-selling models like the Altima, F-150, and Fusion priority.
 - Implement tiered pricing for high-demand versus low-demand inventory and reevaluate pricing in relation to MMR to lower negative-margin sales.
 - Promote high-margin trims and models while monitoring and mitigating large negative-margin vehicles.
 - Plan Q4 clearance strategies to reduce margin erosion and take advantage of Q3 for premium sales.
 - Prioritize popular sedans, SUVs, and pickups while taking vehicle condition and mileage into account to match inventory mix to market demand
 - For data-driven decision-making, use dashboards that track units sold, profit versus MMR, margin tiers, and seasonal trends.
 - To increase revenue while reducing losses across models and time periods, combine volume, price, and profit insights.

Q & A

THANK YOU
